William D. Keel

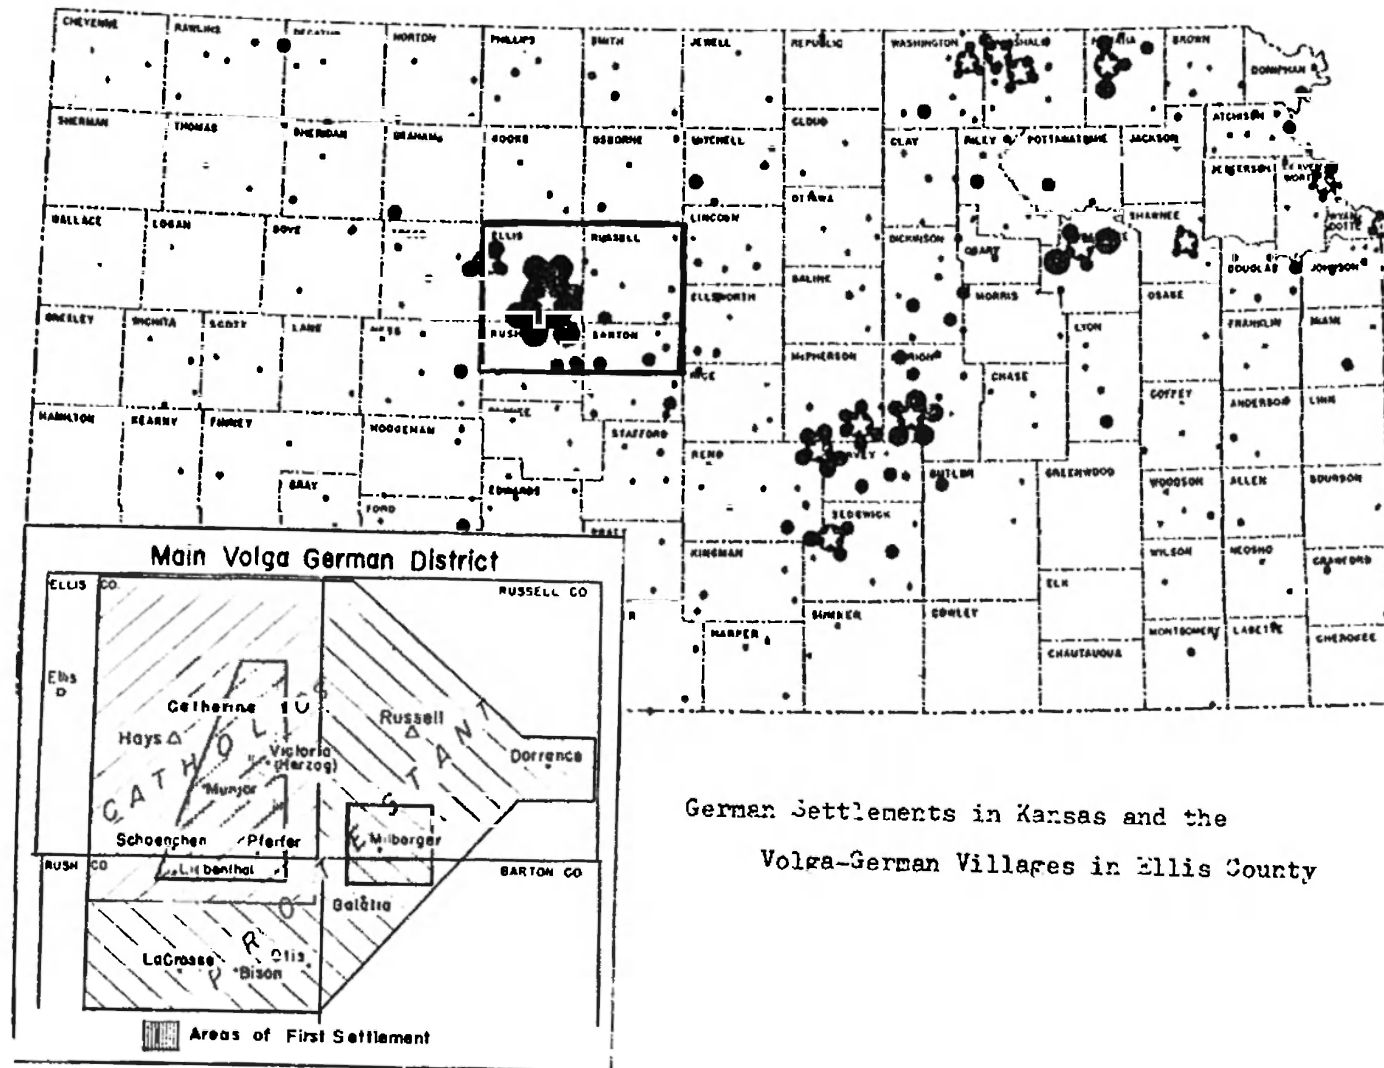

### On the *Heimatbestimmung* of the Ellis County (Kansas) Volga-German Dialects<sup>1</sup>

Beginning in 1875, large numbers of German Catholics from Russia settled on land purchased from the Kansas Pacific Railroad in Ellis County, Kansas.<sup>2</sup> They came from farming villages established in the 1760s along the Volga River at the invitation of Catherine the Great. The names of their new villages in Kansas reflected those of their Russian origin: Katharinenstadt, Herzog, Schoenchen, Pfeifer, Obermonjou, Liebenthal.<sup>3</sup> To this day each village prides itself on its German heritage, maintained in foreign environments for over two hundred years.

The German dialects taken to Russia in the eighteenth century by the forebears of these Kansans were preserved and passed down from generation to generation until the 1940s. The designation of English as the sole language of classroom instruction in the aftermath of the First World War took its toll.<sup>4</sup> The children of the 1920s, who spoke German dialects as their first language, found the transition to English in the classroom to be a bitter struggle. They were determined to give their children a better start. Thus the generation of the 1940s was taught English in the home. The Volga-German dialects of Kansas now face certain extinction.

This study is the search for a linguistic homeland—a *Heimatbestimmung*—for the dialects still spoken in the villages of Ellis County. Such a *Heimatbestimmung* should not be construed to mean that we will determine the points of origin for the ancestors of these Kansas-Germans in the German homeland. Rather, it is essentially a linguistic description of the Ellis County dialects in terms of the characteristics which distinguish the continental West Germanic dialects. The result will be a place on the German dialect map for these colonial dialects. The *Heimatbestimmung* is simply an initial step in unwinding the more involved development of these dialects. A more complete study will have to consider such factors as the immigration records both to Russia and to Kansas, the establishment of *Mutterkolonien* and subsequent *Tochterkolonien* along the Volga, as well as the numerous social influences which certainly played a major role in shaping the dialects as we find them today.<sup>5</sup>

The dialects spoken in Ellis County have often been simply described by the village name, e.g., Munjor dialect, Catherine dialect.<sup>6</sup> In some studies the

dialects are claimed to have their origins in Bavaria, the Lower Rhine, East France, Baden, Württemberg, Hesse, the Rhenish Palatinate, the Upper Palatinate, Swabia, Nürnberg, or simply southwest Germany.<sup>7</sup> Much of the evidence used in arriving at these conclusions was fragmentary, hearsay or mere speculation. A rigorous study of these dialects is therefore long overdue.

Data for our study were collected over a two-year period (1979-81) in direct, tape-recorded interviews with some sixty native informants in the original villages as well as in Hays, Kansas. The basis for each interview was a list of forty sentences in English based on the Wenker sentences utilized in German dialectology for one hundred years.<sup>8</sup> Longer sentences were divided into short phrases to facilitate the actual interview. The use of English often meant the loss of a particular vocabulary item in the original German of the Wenker sentences, but we found that there was no overall loss of data, rather an increase in the variety. English was used in the interviews for two very practical reasons: Few of the informants knew Standard German and for those who did the tendency to give the "correct" form, i.e., instead of the dialect form to give the High German equivalent, was a definite problem. The use of the original German sentences would have confused the majority of the informants and encouraged those who knew Standard German to avoid the dialect word.

Phonetic transcriptions of these recorded interviews were then compared with the results of similar research in Central Europe. The published materials of *Der Deutsche Sprachatlas*, *Der Deutsche Wortatlas* as well as the numerous individual dialect studies such as those by Schirmunski and Wiesinger were essential to our efforts.<sup>9</sup> We were also able to compare our results with the findings of studies conducted during the 1910s and 1920s on the Volga-German dialects in Russia and Germany. Von Unwerth interviewed Russian-German prisoners of war in a Westphalian camp during 1917.<sup>10</sup> On the basis of his interviews, using the Wenker sentences, he described three dialects from the Volga region: 1) Upper-Hessian (Spessart/Vogelsberg), 2) Hessian-Palatine (Worms/Odenwald), 3) West Palatine (Zweibrücken). Dinges, a Volga-German linguist at the University of Saratov, concurred in Von Unwerth's description of the three above-mentioned dialects on the Volga and added four more dialects to the list based on his own research in the Volga colonies: 4) South Hessian (Taunus/Aschaffenburg/Darmstadt), 5) East Middle German, 6) East Low German, and 7) the city dialect (*Stadtmundart*) of Katharinenstadt.<sup>11</sup> For the four West Middle German dialects Dinges offered a set of key words to help identify the dialects:

Upper Hessian: *brouder* 'brother,' *fest* 'firm,' *flāf* 'meat.'

Hessian-Palatine: *fēst* 'firm,' *gəbrəxə* 'broken.'

West Palatine: *fēst* 'firm,' *gəbrəx* 'broken,' *haus* 'house.'

South Hessian: *fēst* 'firm,' *brüdr* 'brother,' *fritselt* 'told.'

Schirmunski concentrated his research efforts on the Black Sea Germans, but also discussed Dinges' findings. Schirmunski expounded the theory that some of the so-called South Hessian dialects were the products of developments in the Volga colonies which paralleled developments in the South Hessian dialect area. These dialects were thus not brought by colonists from Germany to the Volga, but derived via dialect mixture and leveling as occurred immediately to the south of Frankfurt in Germany. Schirmunski labels such dialects New Hessian.<sup>12</sup>

Sample sentences from the Ellis County dialects, based on the Wenker sentences:

- Sentence 4. 'The good, old man broke through the ice with his horse and fell into the cold water.'
- Obermonjou: dr gūdā aldā man is in ais gēbrōxā mit dem gaul in kald vasr  
Pfeifer: dr ald man is durçn ais gēbrōxā mit san gaul un ins kaldā vasr gštertst  
Schoenchen/  
Liebenthal: dr gudā aldā man is durç dn ais gēbrōxā mit dn gaul un is in kaldā vasr nai gfalā  
Herzog: dr gūdā aldā man is durçn ais gēbrōx mitsamt sin gaul un in kaldā vasr gfal  
Katharinenstadt: dr gūdā aldā man is durçs ais gēbrōxā mit saim fērt un is ins kaldā vasr gfalā
- Sentence 11. 'I'm going to hit you over the head with a wooden spoon, you monkey.'
- Obermonjou: iç flag dir ibr dn kōp midēm heltsənā lefəl du af  
Pfeifer: iç flag dir ibr dn kōp mit dn heltsənā lefəl du af  
Schoenchen/  
Liebenthal: iç flag dir ibr ən kōp mit nēm heltsənā lefəl du af  
Herzog: iç flag dir ibr dn kōp mitn heltsənā lefəl du af  
Katharinenstadt: iç flag dir inēm kōp mitnēm heltsərnā lefəl du af
- Sentence 19. 'Who stole my basket of meat?'
- Obermonjou: var hat man kōrb gštōlā mit man flaiḡ  
Pfeifer: ver hat man bæskət uv flāḡ gštōlā  
Schoenchen/  
Liebenthal: ver hat man kōrb mit flaiḡ gərapṭ  
Herzog: ver hat ma kōrb mit flaiḡ gštōl  
Katharinenstadt: ver hat mai kōrb flaiḡ gštōlā
- Sentence 24. 'When we got home last night, the others were already in bed and were fast asleep.'
- Obermonjou: vi mr tsərik san kumə hun di andərə ins bet gəlēgən un gūd gflōfə  
Pfeifer: vi mr tsərik san kumə gestərn hun si alə gəlēgən in bet un alə gflōfə  
Schoenchen/  
Liebenthal: vi mr tsərik san kumə varən di andərə fōn im bet un hun gflōfə  
Herzog: vi mr tsərik sin kum han si in bet gələn un fest gflōf  
Katharinenstadt: vi mr tsərik sin kumə gestərn ovənd di andərə varə ins bet un habə fest gflāfə

Sentence 26.	'Behind our house there are three beautiful apple trees with little red apples.'
Obermonjou:	hiniç unsrə haus san drai fənə ebəlbēm mit glānə rodə ebəljə
Pfeifer:	hin unsəm haus san fənə ebəlbēm mit fənə rodə ebəl
Schoenchen/ Liebenthal:	hinər unsrə haus san drai fənə ebəlbēm mit glānə rodə ebəl
Herzog:	hiniç unsrə haus sin drai fənə ebəlbēm mit glēnə rodə ebəl
Katharinenstadt:	hintər unsər haus sin drai fənə ebəlbēm mit fənə rodə ebəljə
Sentence 40.	'I drove with the people across the meadow and into the grain field.'
Obermonjou:	iç san mit di lait durç di ftep gfarə inə grīn fēl
Pfeifer:	iç san mit dn lait ibr pastər gfarə ins vatsfeld
Schoenchen/ Liebenthal:	iç san mit di lait ibrn pastər gfarə nai ins vatsland
Herzog:	iç sin mit də lōit ibrs feld gfar nibr in vetsfeld
Katharinenstadt:	iç bin mit di lōit durçs feld gfarə un ins grīnə fudər

In what follows, we will make a step-by-step analysis of the Ellis County dialects in order to determine their probable linguistic origins. From the sample sentences one can readily determine that none of the dialects exhibits radically different forms. However, there are variations in lexical material as well as some striking phonetic differences. For instance, the occurrence of *fērt* vs. *gaul* 'horse' in sentence four; the distinction between *gstol* vs. *gstolə* 'stolen' in sentence nineteen; the vowel in *gslāfə* vs. *gslōfə* 'slept' in sentence twenty-four; or the vowel in *glānə* vs. *glēnə* 'small' in sentence twenty-six.<sup>13</sup>

Map (1) indicates the major isoglosses of the West Middle German (WMG) dialect area in Central Europe. It is clear that all of the Ellis County dialects find their origin in WMG territory. Why can we make this claim? First, the Ellis County dialects all exhibit the shift of West Germanic intervocalic voiceless stops to fricatives (*k, t, p* > *x/ç, s, f*) as well as the shift of West Germanic *t* to *ts* in most other environments. Thus the dialects must originate south of line (1) on the map (Köln-Kassel), which delineates Middle German dialects to the south from Low German dialects to the north. Examples:

Ellis County Dialects	vs.	Low German	
<i>iç</i>		<i>ik</i>	'I'
<i>maxə</i>		<i>makə</i>	'to make'
<i>vasr</i>		<i>vatr</i>	'water'
<i>tsait</i>		<i>tīd</i>	'time'
<i>käfə</i>		<i>kōpə</i>	'to buy'

Second, our dialects do not exhibit the Upper German shift of West Germanic *p* to *pf* in such words as *Apfel* 'apple' and *Pfund* 'pound.' Nor do we find the East Middle German reflex of word-initial West Germanic *p* realized as *f*, e.g., *funt*

Map 1. The West Middle German Area.

'pound,' except in the Katharinenstadt dialect. (By the end of our discussion it will be clear that the Katharinenstadt dialect is also a WMG dialect, although it has undergone a different development.) The Ellis County dialects must be located to the north and west of line (2) (Speyer-Kassel), which separates WMG to the northwest from Upper German to the south and East Middle German to the east. Examples:

Ellis County Dialects/ Katharinenstadt	vs.	Upper German/East Middle German	
<i>ebəl</i>		<i>apfəl</i>	'apple'
<i>kəp</i>		<i>kəpf</i>	'head'
<i>punt/funt</i>		<i>pfunt/funt</i>	'pound'
<i>pefr/fefr</i>		<i>pfefr/fefr</i>	'pepper'

Other evidence which supports the WMG area over South or Southwest Germany as the general linguistic homeland for these Kansas-German dialects includes the following: 1) Unstressed *ch* [ç] is retained in pronominal forms such as *ich* 'I,' *mich* 'me,' *dich* 'you, sg.,' *euch* 'you, pl.,' and *sich* 'third person reflexive.' This characteristic excludes most of the Upper German dialects including all of Bavarian, Swabian, and Swiss German as well as substantial portions of East Franconian and Alsatian.<sup>14</sup> 2) The formation of the diminutive is based on the typically WMG suffix *-chə/-jə* (the latter involving slight voicing or lenition). The distinctive plural form of this suffix often occurs as *-chər/-jər* as in *jēffər* 'little sheep'; many times, however, the plural sounds identical to the singular as in *fēgəlʲə* 'little bird(s)' or *ebəlʲə* 'little apple(s).' The form *ʃdigəlʲə* 'little story' evidences the double ending common to words ending in *g/k* in the WMG area near and to the north of the Main River. The diminutive ending points directly to the Palatinate and the South Hessian area as a potential linguistic homeland for these dialects.<sup>15</sup> 3) The differentiation in the loss of the reduced vowel *ə* in the prefix *ge-* of past participles in these Ellis County dialects also points to the South Hessian area and the Palatinate. Reduced *ə* is typically lost before spirants, e.g., *gfarə* 'driven,' *gʃlōfə* 'slept,' or *gsāt* 'said.' The vowel of the prefix is retained before stops and sonorants, e.g., *gəbraxə* 'broken,' *gədū* 'done,' or *gəlāfə* 'run.' This characteristic separates our dialects from the majority of Hessian dialects north of the Main River as well as the Lower Alsatian, South and East Franconian dialects bordering the WMG area to the south.<sup>16</sup>

An important isogloss also eliminates the northwestern part of the WMG area from consideration. This is indicated as line (3) on the map (just SE of Koblenz). The Ellis County dialects would be located to the south of this line in the Rhenish Franconian area, not in the Middle Franconian territory to the north. Examples:

Ellis County Dialects	vs. Middle Franconian
<i>vas</i>	<i>vat</i> 'what'
<i>das</i>	<i>dat</i> 'that'
<i>uf</i>	<i>up</i> 'on'
<i>dɔrf</i>	<i>dɔrp</i> 'village'

Further, the southwest (Lothringian) and the northeast (North or Low Hessian) of the Rhenish Franconian area do not exhibit the New High German diphthongs (*au*, *ai* /*ɔi*/) as reflexes of the Middle High German long high vowels (*û*, *î*, *iu*) as do the Ellis County dialects (see map [1], line [4]). Examples:

Ellis County Dialects	vs. Lothringian/North Hessian
<i>haus</i>	<i>hūs</i> 'house'
<i>haisər</i>	<i>hīsər</i> 'houses'
<i>lait</i>	<i>līt</i> 'people'
<i>baisə</i>	<i>bīsə</i> 'to bite'

The salient feature of the Hessian dialects north of Frankfurt (Central or Upper Hessian), the so-called *gestürzte* 'toppled' diphthongs (*ou*, *ei*, *oi* as reflexes of MHG *uo*, *ie*, *üe*), is also lacking in the Ellis County dialects which exhibit the regular long monophthongs *ū*, *ī*, *ī* (the latter also an example of the

widespread unrounding of front rounded vowels in Middle and Upper German).  
Examples:

Ellis County Dialects	vs. Central Hessian	
<i>g̃pud</i>	<i>goud</i>	'good'
<i>brüdr</i>	<i>brouər</i>	'brother'
<i>līb</i>	<i>leib</i>	'dear'
<i>mīd</i>	<i>moid</i>	'tired'
<i>k̃pī</i>	<i>koi</i>	'cows'

Map 2. Possible linguistic homelands for the Ellis County dialects: 1) South Hessian, 2) Hessian-Palatine, 3) West Palatine.

What remains as a possible linguistic homeland for our dialects is the Rhenish Franconian dialect area from Zweibrücken to Frankfurt. Since we can assume that the Ellis County dialects all represent dialects that left speakers behind on the Volga and since we can compare our findings with those of von Unwerth, Dinges, and Schirmunski, the Ellis County dialects (except that of Katharinenstadt) are limited to three possible linguistic homelands: 1) South Hessian, 2) Hessian-Palatine, 3) West Palatine (see map [2]).

Many vocabulary items in the Ellis County dialects support this general location as well. Examples: *köpve* 'headache,' *laibvê* 'stomachache,' *pêtr* 'Godfather,' *got/get* 'Godmother,' *daxtərman* 'son-in-law,' *hingəl* 'chicken.' An apparent exception to this general rule is *ŋerç* 'daughter-in-law,' which is today found in isolation in the extreme west of the WMG area. In this case the Ellis County dialects reflect their two-hundred-year isolation from developments in the home country and retain the historically older form rather than replace it with a version of Standard German *Schwiegetochter*.

Of the three possibilities listed above as potential linguistic homelands for the Ellis County dialects (South Hessian, Hessian-Palatine, West Palatine), Hessian-Palatine and West Palatine would at first glance seem to be excluded because of the characteristic palatalization of *s* in words such as *fêst* 'firm' in the two dialects (see map [1], line [5]). None of the Ellis County dialects exhibits this feature. We would appear now to have reduced the possibilities to one, South Hessian. Indeed, South Hessian was found to be rather common on the Volga.<sup>17</sup> Certainly the village dialects of Obermonjou, Schoenchen, Liebenthal and Pfeifer would have no problem being classified as South Hessian dialects. The dialect of Herzog, however, while not palatalizing *s* in *fêst*, evidences at least three major features which isolate it from the other villages and perhaps from South Hessian. 1) The Herzog dialect typically has *ē/e* as the reflex of MHG *ei*; the other villages have *ā*. Examples:

Herzog Dialect	vs. Rest of Ellis County
<i>hem</i>	<i>hām</i> 'home'
<i>vêts</i>	<i>vāts</i> 'wheat'
<i>glēn</i>	<i>glān</i> 'small'
<i>sēf</i>	<i>sāf</i> 'soap'

2) In Herzog the past participles of strong verbs have no ending; in the other dialects we find only the loss of final *n* with *ə* retained. Examples:

Herzog Dialect	vs. Rest of Ellis County
<i>gslōf</i>	<i>gslōfə</i> 'slept'
<i>kum</i>	<i>kumə</i> 'come'
<i>gfun</i>	<i>gfunə</i> 'found'
<i>gəbrax</i>	<i>gəbraxə</i> 'broken'

3) The past participle of the verb *sein* 'to be' in the Herzog dialect is *gavēn* 'been' as opposed to *gavəsɪ* in the others. All three of these characteristics could support the classification of the Herzog dialect as a West Palatine dialect, quite distinct from the village dialects to the south (Obermonjou, Schoenchen, Liebenthal and Pfeifer) and that of Katharinenstadt to the north.<sup>18</sup>

What can we conclude about the dialect of Katharinenstadt? We know several important facts. Colloquially, the dialect of Katharinenstadt is said to be

closer to *Hochdeutsch*. The vocabulary of Katharinenstadt often exhibits lexical items not used in the other dialects which may reflect more influence from the written language, e.g., *fert* instead of *gaul* 'horse,' or *bin* instead of *sin/san* '(I) am.' Another influence from the written language is undoubtedly the pronunciation of such words as *boum* instead of *bām* 'tree,' *glain* instead of *glēn/glān* 'small,' *habə* instead of *hun/han* '(they) have,' or *gsläfə* instead of *gslōf/gslōfə* 'slept.' We also know that the dialect of Katharinenstadt (later Marxstadt) on the Volga defied classification.<sup>19</sup> Dinges labeled it a Middle German city dialect (*Stadtmundart*). It is really no surprise that the dialect of Katharinenstadt in Ellis County reflects the linguistic situation of its namesake on the Volga.

We have thus arrived at a three-way classification of the Ellis County dialects: 1) Katharinenstadt dialect as a WMG *Stadtmundart*, 2) Herzog dialect as a possible West Palatine dialect, and 3) South Hessian dialects in Obermonjou, Pfeifer, Schoenchen and Liebenthal. As was noted earlier, this is by no means a definitive statement regarding the historical origins of the speakers in these villages. Much work also remains to be done in a thorough historical/comparative analysis of these dialects. We have simply classified these Kansas-German dialects with respect to German dialects in general. We have conclusively shown that most of the speculation concerning the dialects spoken in Ellis County was apparently based on insufficient evidence. All too often, a linguistic feature of these dialects, taken in isolation, might point to an origin in another dialect area, e.g., *daxtərman* 'son-in-law' would support a Swabian origin as well as a Palatine or a South Hessian. This type of reasoning has perhaps led many to conclude that the dialects are either mixtures of several dialects or have their primary origins outside of the Zweibrücken-Frankfurt area. We are confident that the phonetic and lexical evidence confirms our findings.
